Skills & Experience

“Water Features by Design is an Australian-owned and operated company. We personally oversee each project from design to completion with after-sales training in water playground management and maintenance as part of the service.”

Water Features by Design (WFBD) is a recognised leader in the design and construction of water parks and splash pads and the only WA-owned and operated company that designs, manufactures and constructs its water park projects from start to finish.

Founded in 2002 by Company Director Tony Jones WFBD is a name synonymous with quality, innovation and exceptional customer service with more than 1000 commercial and residential projects to its name, along with the design and construction of 23 major water parks throughout WA, Vic, NT, QLD and NSW.

Each park is designed by Company Director, Tony Jones, who personally oversees each project from design to completion with after-sales training in water park management and maintenance as part of the service. His local knowledge and experience ensures that each project is completed on time and budget.

“Unlike other offerings on the market, our water park components are locally manufactured in WA, which helps keep costs down and provide more flexibility when it comes to design.”

We can tailor a park to Council specifications through use of any colour scheme or design theme imaginable. Our products are constructed from 304 or 316 stainless steel and approved by suitably qualified engineers and Kid-Safe WA.

We can custom make any feature or component to reflect and promote the local fauna, flora or history. The design possibilities are endless and we pride ourselves on being able to offer a truly unique and purpose-built application for every client.

A Proven Track Record

“We’ve worked extensively across the country under some of the harshest climatic and geographic conditions possible with 25 major water parks projects to our name. We also supply compomentry to water park projects throughout Australia and beyond.”

Every site presents a unique set of challenges which requires flexibility and an understanding of local conditions to overcome. We’ve dealt with drought, cyclones, floods, excessive wind and hard, solid subterranean rock. This experience has helped forge a water park design and installation process built to withstand extremes in temperature, climate and geographic locations.

Tony’s background in landscape construction along with his expertise in water park hydraulics and his ability to communicate effectively with clients and contractors at all levels ensures that each project runs smoothly and according to budget.

He is supported by a local team of highly qualified and experienced employees and contractors, all of whom come with a proven track record through their involvement in many of our water park projects over the past five years.

The WFBD team operates like a well-oiled machine with the experience of eight water parks to its name which has helped hone the process and led to shorter lead times, faster turn-arounds and a more efficient operation overall.

Along with a range of special customised features, each water park includes the following elements as standard:

- push button activation
- automatic chlorine and UV water treatment
- no standing water
- concrete or soft-fall flooring with high slip resistance
- random sequenced features
- unlimited choice of colour schemes, themes and layout
- interchangeable and replaceable pole feature components
- Health Department of WA approval
